

MEDICATION MANAGEMENT

EQUIPMENT POLICY

Aloha,

This is a reminder that Wellness Partners Mental Health requires patients to provide vital signs before medication management appointments. Patients should have access to a scale and blood pressure cuff for each visit with their prescriber. These instruments are readily available online and at local drug stores. Alternatively, you may obtain your vitals by visiting your primary care physician or a nearby CVS/Walgreens Minute Clinic.

Many psychiatric medications can affect a patient's vital signs. As a result, patient vitals (height, weight, blood pressure, and pulse) are requested before each appointment to ensure essential baseline data is documented and to monitor for any future changes.

Failure to provide the requested vital signs before your medication management appointment may delay your ability to receive your prescription or refill.

Thank you for your cooperation. Please feel free to contact the office if you have any questions or concerns.

Mahalo!
